Use of fatty amine salts in combination with fatty acids as reagents for the flotation of potassium salts (sylvinite)

8

Abstract

The invention relates to a composition which is effective as flotation reagent and comprises A) at least one compound of the formula [R¹-NH₃]⁺ X^{-} , where R^{1} is a C_{8} to C_{22} alkyl radical and X^{-} is an anion, and B) a branched fatty acid having a chain length of 8 to 22 carbon atoms.
